

SNOW REMOVAL

Full Service at Dejana means we start snow removal operations automatically at pre-determined levels, then complete the service in a timely and efficient manner.

Now offering snow removal programs consisting of:

- Pushing
- Piling
- Physical removal of snow
- Melting
- Application of liquid & solid de-icing agents

ENVIRONMENTAL & ECONOMIC IMPACT

Our Snow Melters get rid of piles of snow to return your customers' property to full access quickly and economically. We do so

in an efficient and environmentally friendly way so that trash, sediment, and heavy pollutants are trapped and retained for separate disposal.

Melting eliminates the double and triple handling of snow associated with trucking to storage/dump sites.

The reduction in equipment and the elimination of the use of dump trucks makes compelling economic and environmental sense.

HOW IT'S DONE

- We own, operate and maintain a fleet in excess of 1,200 pieces of equipment, many of which are customized and highly specialized.
- We provide fuel trucks and fully-equipped mobile service units staffed with experienced heavy equipment mechanics.
We employ managerial and supervisory personnel fully experienced in all phases of snow removal operations & the contractor provides payloaders and operators to load the melter.

- Our snow removal equipment includes snow melters, plows, payloaders, skid steers, and spreaders.
- On-call 24 hours per day, 7 days per week during snow season.
- Snow Removal Operations can be contracted to begin at a pre-determined start level. You never have to call us!

MELTING SNOW VS TRUCKING

- The costs associated with trucking or hauling snow to remote storage sites can typically exceed the cost of melting snow on-site.
- Melting on-site eliminates the need for rucking and the danger of slip and fall accidents related to the thawing and re-freezing of piled snow. The customer's site is returned to full functionality with a minimum loss of revenue and customer inconvenience.
- Melter leases are available to qualified customers on a single or multi-seasonal basis.
- The lease includes training on melter operation and a warranty on all major components.
- The lessor is responsible for all operating costs. Leases are subject to melter availability and seasonal commitments.
